# CELONA EDGE APPLIANCES

Pre-provisioned, high-performance appliances running the Celona Edge Software

Aruba is partnering with Celona to deliver CBRS-based private LTE networks to the enterprise.

The Celona Edge Appliances are based on Intel's latest x86 architecture that run the Celona Edge software to deliver the required control and data plane services for a private mobile network. These services include the enterprise optimized LTE packet core, domain proxy functions for CBRS spectrum in the United States, centralized encryption with SIM based authentication of wireless clients connected to the Celona access points (APs).

Celona Edge software acts as the data plane for the private LTE network and is managed via cloud-hosted Celona Orchestrator. It shares network telemetry data with Celona Orchestrator and enforces network access policies on a per application, device group and network segment basis.

### KEY BENEFITS

**Deployed as overlay:** Seamlessly integrates with the existing enterprise IT network architectures

**Plug-and-play experience:** Remote provisioned via Celona Orchestrator for the initial install and ongoing configuration

**High data plane performance:** Leverages Intel DPDK architecture on standard x86 server hardware

**Highly available and scalable:** As a cloud-native network OS, Celona Edge automatically clusters across multiple nodes and provides enterprise grade scalability without the operational complexity
